

M.S. Assistantship in Entomology

Funding is available for an Entomology M.S. Research Assistantship in the Plant and Environmental Protection Sciences Department at UH Manoa beginning in January 2021. Research will focus on the role of native and introduced plant species' pollen on honey bee health in Hawaii. This research will incorporate field and molecular based techniques to address conservation challenges faced by land managers.

Interested applicants are asked to email their CV, unofficial transcripts, a one-page cover letter describing your research interests and career aspirations, GRE scores (if available), and contact information for three professional references. All materials must be received for consideration. GRE scores must be available for formal admission into the program.

For PEPS Entomology program criteria, visit <https://cms.ctahr.hawaii.edu/peps2/GRADUATE/Entomology>.

Qualifications:

- B.S. in entomology, biology, molecular biology, or a related field
- Basic skills in laboratory work
- Basic skills and knowledge in computers and software (e.g. Microsoft Office, statistical programs, Python, etc.)

For full consideration, **please email questions and application materials by October 31** to:
